-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1- 2, 6-19, 21-22 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 02/080743 in view of WO 99/02081 (both cited by applicant). WO 02/080743 discloses a Baffle operated liquid heating and dispensing system for a single serve beverage brewer that shows all the features of the claimed invention but fails to explicitly show a mobile unit with a battery. WO 99/02081 discloses a coffee machine especially for mobile use that shows a coffee machine, especially for mobile use, in which the pressure required for extracting the ground coffee is generated by compressed air (7). The water needed for preparing the coffee is kept in a heat-insulated storage container (8). The water can be heated with an electric heating element (9). The coffee grinds are packaged in packaging having the form of an endless band (23). The hot water is moved by the compressed air from the storage

Art Unit: 3742

container into an extraction chamber, where it is pressed through the ground coffee.

The sides and top of the extraction chamber are delimited by a compression pipe (43) which is pressed onto an endless band (23). The quantity of water used for extraction is determined by the level of the fill weight of the extract in the cups. The force needed for moving the endless band (23) and pressing down the compression pipe (43) is generated by actuating a hand lever (37).

Allowable Subject Matter

Claims 3-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Taylor, Shigenobu, Zimmermann and Streeter are cited to show structure similar to the claimed invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DANIEL L. ROBINSON whose telephone number is (571)272-4788. The examiner can normally be reached on m-f 5:30-2:30.
